**AX-50**  
Automation Component

Technical Data:

|                                                                  |                                                                                |
|------------------------------------------------------------------|--------------------------------------------------------------------------------|
| Forming force (cam disc & drive dependent):                      | max. 50kN                                                                      |
| Stroke (dependent on cam):                                       | max. 45mm                                                                      |
| Tool installation height in UT:                                  | 80mm to 309mm                                                                  |
| table surface                                                    | Width 350mm x depth 182                                                        |
| Stroke position adjustment<br>Basic setting:<br>Fine adjustment: | Setting in 4mm increments<br>+/-3mm, via threaded spindle<br>on the press ram. |
| Weight:                                                          | approx. 260kg, depending on<br>the drive                                       |
| Number of strokes at 10mm stroke max.                            | 600/min                                                                        |
| Price without drive & central lubrication                        | 28.000€                                                                        |

Options:

- Cam disks with different strokes and motion profiles
- Interchangeable table plates
- Press force monitoring
